EFA-SmartConnect® -Module

ESC4.0 EFA-SmartConnect®- Module

Manage the doors in one app. The EFA-SmartConnect®- Module continuously sends status reports to the app. EFA-SmartConnect® saves all relevant information in the local network. The user decides when and which information is sent to EFAFLEX. Through the use of modern end-to-end encryption, all information remains secure and confidential.

EFA-SmartConnect® is the IoT solution for networked doors. The associated, user-friendly app enables central monitoring and displays the status of all doors clearly and in real-time. According to the diagnosis - service - maintenance principle, faults can be prevented in good time and maintenance can also be planned in advance. Actual malfunctions are remedied using accelerated processes with reduced downtimes.

Basic parameters can be set via the app. Use of the existing WLAN possible. Data sovereignty remains with the user. No registration necessary. Independent of cell phone networks. Modern security standards such as WPA2, PSK, AES etc. Additional proprietary encryption of TCP and UDP packets

EFAFLEX "IOT upgrade" to future-proof Release 4.0 for EFA-TRONIC® and EFA-TRONIC®-PROFESSIONAL, including an optional EFA-SmartConnect®-Module that can be activated, in conjunction with a free app and Wi-Fi connection with a significantly expanded service scopes.

Network-compatible as standard by retrofitting existing doors of the same control family and/or upgrading the app free of charge.

Activation Wi-Fi: without, activation ex works, during assembly
